

## Hands-On, Minds-On Instructional Practices

### **The Science House Presents: Shift Happens**

So you are already doing great STEM work. Now what? How can we make it even better? Join us for a guided self-reflection time where we work shifting lessons toward gold-standard PBL. Participants will experience a STEM lesson and then work through a guided reflection process that demonstrates how to identify areas that can be enhanced to become more student driven and minds-on. Participants should expect ideas on how to take already "good" lessons and tweak them to have a richer STEM impact, and a self-reflection form to guide the process. Participants should attend for encouragement about STEM and for guidance on how to shift toward gold-standard PBL work.

### **Presentation Target:**

Middle School

### **Presenter(s):**

1. Michelle Benigno Taylor, Director, Mountain Office, The Science House at North Carolina State University
2. Jason Carter, Assistant Director, Mountain Office, The Science House at North Carolina State University
