

Keeping Water Renewable: A Blended Lesson for 8th Grade Students

PBS North Carolina will debut its newest blended lesson, aligned to the North Carolina Essential Standards and available for free on PBS LearningMedia. Keeping Water Sustainable, which blends interactive components and hands-on projects, poses a problem for the class to solve, using animated figures who look like the students watching them. PBS NC's blended lessons are produced as part of our overall mission of increasing educational equity. A recent survey of North Carolina teachers showed that 98% of underserved students in the state benefit from these personal, contemporary and fully aligned educational resources.

Presentation Target:

Middle School

Presenter(s):

1. Paula Edelson, PBS North Carolina
2. Frank Graff, Executive Producer, PBS North Carolina
3. Beth Harris, Middle School Science Specialist
