Spanning Silos with Student Storytelling

Participants will experience the FUTURES Science Communication training program, which seeks to empower community college students from traditionally underrepresented backgrounds to inform and inspire the general public on the many possibilities within the realm of STE(AH)M. Through leveraging the lived experiences of the program's alumni, in conjunction with the reflections of the presenters, session participants will be introduced to the transformative power of storytelling in science. Participants also will learn more about how the sponsoring organization, the UNC Morehead Planetarium and Science Center, partners with various community and education-based entities to realize inclusive opportunities for development with diverse student populations.

Presentation Target:

Higher Education

Presenter(s):

1. Chris Harried, Community Engagement Coordinator, Morehead Planetarium & Science Center, University of North Carolina at Chapel Hill
