

## PREPARING AND TEACHING THE WHOLE CHILD

**Name of Submitter:** Marvis Henderson

**Submitter Email:** mehenderson81@gmail.com

### **Connecting the Body and Soul through Dance**

As an interactive workshop, participants will discover how dance concepts can be incorporated into their classroom to enhance their students' science, technology, arts, math, language and social science skills through dancing. Although dancing is a social activity, it can be used to teach math skills and biological terms to elementary students. Math skills include adding, subtracting, multiplying, dividing and fractions. From the brain, the head, shoulders, and feet, dancing allows the students to identify how the terms are used through practical application. More importantly, the teacher can use music from different genres to teach those concepts.

### **Presentation Target:**

Elementary School
