Engaging Students Through the UN Sustainable Development Goals

As the inter-connected nature of our world becomes more apparent, it is essential that students understand how they can begin to create change. Teachers will explore how the United Nations (UN) Global Sustainable Development goals can be used to engage student learning, connect to the curriculum and motivate students to take ownership of their interests. From small authentic experiences to expansive curriculum design, we will touch upon how to integrate real-world topics to create authentic experiences in your classroom for all learners. The session will showcase how this work clearly connects to CTE courses, develops connections with community partners and can be a catalyst to move students through an engineering-design process.

Presentation Target:

High School

Presenter(s):

1. Elizabeth Luna, Teacher, Athens Drive Magnet High School - WCPSS
2. Terrill Hartenstein, Magnet Coordinator, Athens Drive Magnet High School - WCPSS
