Biomake: Unleashing the Power of 3D Biology

Come step into the future of biology education and join us on an extraordinary journey where science and technology converge to revolutionize the way we understand and explore biological concepts. In this presentation, we will dive into the realm of 3D design and its impact on learning in biology. Discover how 3D design is reshaping the way we visualize, analyze and comprehend complex biological concepts with clarity and depth. Through real-world examples, a case study and a hands-on activity, the remarkable ways 3D design is enhancing student understanding of biological concepts will be showcased.

Presentation Target:

High School

Presenter(s):

1. Eric Saliim, Program Manager, NCCU
