### **Climate Complexity, Variability and Change: Re-Living the Yellow Brick Road**

On the way to see the Wizard, a diverse cohort shares opportunities and adventures, discovers alternative perspectives, ultimately finding themselves. Admonished to “Pay no attention to that man behind the curtain!,” they’re challenged to use their brains and exercise empathy and courage, to “find” themselves – a fitting analogy for understanding our own complex world outside of our own silos. Like Dorothy and her friends, let’s re-live this Oz model in the context of appreciating the complexity and challenges of the climate system and of our own Yellow Brick Road. Complex? Certainly. Variable? For sure. Changing? Absolutely.

### **Presentation Target:**

High School

### **Presenter(s):**

1. John White, Meteorologist -- U.S. Gov't
