Presentation Title: International Connections: Early Exposure to Cross-Cultural Perspectives in a STEM Education Setting

Are you interested in increasing intercultural exposure for your North Carolina classroom through shared STEM activities? Do you have teaching experience in North Carolina classrooms to share in a session that will help improve cross-cultural learning opportunities for North Carolina students and align with the new North Carolina Science Standards and North Carolina classroom realities? University faculty and board members from the Society for Scientific Advancement (SOSA) would like to engage North Carolina teachers in this session to gather teacher input around partnership opportunities that would connect North Carolina teachers and students with counterparts in the Caribbean in meaningful and sustainable ways, including through joint project-based activities. All K-12 educators are encouraged to attend.

Presentation Target:

All Audiences

Presenter(s):

1. Keriayn Smith, Founder & Board Member, Society for Scientific Advancement; Associate Professor, School of Data Science & Society, University of North Carolina at Chapel Hill
2. Danielle Webster, Co-Founder & Board Member, Society for Scientific Advancement; Associate Lecturer, Department of Health Sciences, University of Central Florida
