Can You See Me? An Exploration of Successful Middle School Black Boys in STEM Courses

In the United States, there are 7.7 million Black children in our school system. The news you hear about Black males is normally negative regarding their education, especially at the middle school level. Using narrative inquiry, my research study gave middle school black boys a chance to share their stories regarding what has made them successful in their science and math classes, including the type of support they have had to help them be successful. The participants in my presentation will learn my findings and discuss ways to support successful middle school Black boys using culturally relevant pedagogy.

Presentation Target:

Middle School

Presenter(s):

1. Dr. Obioma Chukwu, Teacher, Pitt County Schools Early College High School
