My Data is Cooler than Yours! Using Antarctica Ice Core Data in the Classroom

Join an American Meteorological Society-certified educator to explore lessons developed by the AMS as part of the National Science Foundation-sponsored Project Ice initiative.

Participants will explore a series of 5E lessons created to engage students with real-world data from the Center for Oldest Ice Exploration (COLDEX). Educators interested in helping students learn more about Antarctica, polar science, ice core analysis, paleoclimatology and/or climate change topics will benefit from this session. Walk away with complete ready-to-implement lessons. Information about AMS educator programs will also be shared.

Presentation Target:

High School

Presenter(s):

1. Abria Vodenichar, Educator, Bethany Community School
