Empowering Teachers with Computer Science

With the passing of N.C. House Bill 8 and today's evolving career landscape, integrating computer science into curricula is essential. This process must start in elementary school. Wake County Public School System Magnets and North Carolina State University's Friday Institute have partnered to equip teachers with skills to integrate computer science through professional learning that includes hands-on training, resources and ongoing support.

This session will offer participants active exploration of exemplary lessons across subjects and grade levels, created by WCPSS educators. Participants will engage in coding, digital tools and strategies to integrate coding across disciplines, leaving with lesson plans, practical strategies and the confidence to inspire young learners in coding.

Presentation Target:

 Elementary School

Presenter(s):

1. Joshua Hunter, Senior Administrator, Wake County Public Schools
