Presentation Title: A Critical Need for Geologists in the Job Market

As the world transitions from a fossil fuel-based society to one based on minerals, there will be a growing demand for geoscientists in the next decade. This growth is attributed to the need for new energy resources, sustainable land management, new emerging technologies, and environmental protection. We'll discuss these issues as well as ways to engage students using real world geoscience topics.

Presentation Target:

High School

Presenter(s):

1. Amy Pitts, Senior Geologist for Education and Outreach, North Carolina Geological Survey
